2) at non-singleton dimension 3

```

The errors occur because when pruning nn.Linear weights in a model like DistilBERT, it's essential to adjust not only the pruned weights but also related components, such as biases and the sizes of downstream layers. Pruning reduces the number of non-zero

parameters in a layer, but this alters the expected input and output dimensions of subsequent layers. As a result, the model encounters shape mismatches during the forward pass.
